

Patient Name: John Doe

Age: 42

1. Findings

- The chest radiograph reveals a normal heart size and shape.
- Lungfields are clear and there is no consolidation or opacity noted.
- Thoracic spine is well demonstrated without any obvious abnormalities.

2. Diagnosis or Impression

No significant abnormalities are detected on this chest radiograph.

3. Recommendation

Follow-up chest radiograph in 6-12 months for routine surveillance.

4. Disclaimer

This report is based on limited clinical information and imaging data, and is purely an imaging interpretation.
